Accurate time is more than a convenience. Your clocks may be impacting more of your daily operations than you realize. Without accurate, precise time throughout a building or campus, major disruptions or even risks can occur.

- Meetings, classes or shifts start and end at different times
- Wages or compensation are disputed
- Critical tasks like surgeries, food preparation or manufacturing processes are tracked inaccurately
- Maintenance staff spends a disproportionate amount of time on clock repairs and adjustments

“Employees didn’t have reliable clocks for calculating shift changes or break times. There were lots of debates about whether an employee was really tardy or not, whether some people were abusing their break times by leaving early and returning late, and whether meetings were starting and ending on time.”

DMR Electronics
Gain Efficiencies and Cut Costs with Synchronized Time

Synchronized time is when all of the clocks across a building or campus display the same, precise time.

The clocks automatically adjust after a power outage or daylight saving time (DST) changes; they are in sync with your computers or tablets; and they require far less maintenance than typical wall clocks.

Synchronized time has significant impacts on the staff and operations of an organization.

- Meetings, classes, shifts and break times run more efficiently
- Fewer disputes over time cards, breaks or wages
- More accurate record keeping for warehouses, manufacturers, health care and other industries
- Maintenance crews can be redirected to other issues
- Maintenance and repair costs are reduced

In this guide, we’ll discuss the technology solutions and options that deliver synchronized time and we’ll present several customer stories to help you think about which solution may be best for your organization.

“Our meetings flow better because everyone sees the same start and stop times, and we experience better operational efficiencies on the production side as well.”

Ecolab
Accurate Time and the Bottom Line

Scenario 1: Wasted class time
The school’s clock system was not synchronized, which meant that the clocks displayed different times and did not match up with the schedule of the school’s bells. Students were often late to class and the school was challenged with enforcing its tardy policy because there was no synchronized, standard way to measure time.

Scenario 2: Inefficient office meetings
The company was using a variety of battery-operated clock styles and types throughout its property, which all displayed slightly different times. This led to employee tardiness at company meetings, complaints about the clocks being out of sync, batteries going bad and extra maintenance time for adjusting the clocks during daylight saving time changes.

Scenario 3: Inaccurate time cards
Some employees at a manufacturing plant adjusted the shop floor clocks so that they ran fast, and lunch breaks were lasting longer than they should have. This time theft drove the owner to seek an accurate clock system that could not be altered.

Scenario 4: Inability to track critical activities
The analog master clock system that served the surgery suite was old and not working reliably. In surgery, precise and synchronized time is critical for allowing medical staff to track how long a patient has been under anesthesia or in surgery, and the hospital’s maintenance staff was frequently adjusting the clocks to ensure that the time was correct and synchronized. Patient safety was at stake.

Scenario 5: High repair costs and maintenance time
None of the clocks at the high school were in sync, they didn’t update for DST and they broke down frequently. The maintenance staff were constantly trying to fix the master controller to get the times right, and were buying a lot of parts to fix the clocks. The facilities manager spent time fixing four or five clocks a month, with no end in sight.

“In such a large facility, it’s crucial that all classes start and end on time, and that even the students in the locker rooms know exactly how much time they have to get to class. If people are constantly too late or too early, it impacts the experience and enjoyment of the facility.”
James Madison University

Synchronized time is more than a convenience. In these actual customer scenarios, clocks that weren’t in sync affected productivity, safety and the bottom line.
Whether you have a 10-person office or a campus with buildings a mile apart, we can help you find a clock or complete system that keeps your operations in sync.

Your Options for Synchronized Time

Wired Clocks & Systems
Modernize existing wired systems, either via an expansion or replacement.

Wireless Clocks & Systems
Expansions and retrofits; integrates with existing wireless OR wired systems.

PoE Clocks
Buildings that don’t have electrical outlets near desired clock locations.

Wi-Fi Clocks
Any building or campus with a reliable Wi-Fi signal that doesn’t require scheduling capabilities.
Complete Wired and Wireless Systems

Both our SiteSync IQ Wireless Master Clock System and the AllSync IQ Wired Master Clock System will integrate with your existing clock systems or replace them.

AllSync IQ Wired Master Clock System
AllSync gives you precision control over your secondary wired clocks and timing systems.

- Works with most major-brand wired clock systems and any new replacement clocks
- Provides synchronized time and control of wired bell signals and electrical circuits
- Automatic DST adjustments

SiteSync IQ® Wireless Clock System
SiteSync IQ seamlessly integrates your new wireless clock system with your existing wired system clocks.

- Works with existing wired and wireless clocks
- Optional signal circuits and wired clock circuits manage portions of your existing systems, including bells, wired clocks, lights and more
- Convenient, remote programming capabilities
- Automatic DST adjustments

IP Network Clocks

IP network clocks – also known as network clocks, Ethernet clocks or NTP clocks – are some of the most popular choices for synchronized time because they have low installation and operation costs, they display precise time and they eliminate the need for a master clock.

Power over Ethernet (PoE) Clocks

- PoE network clocks draw both power and time updates from your organization’s Ethernet connection to display synchronized time.
  - Energy efficient
  - No need for a master clock, AC receptacles or batteries
  - Hassle-free installation and maintenance
  - Automatic DST updates

Wi-Fi Clocks

- Wi-Fi is everywhere, so why not use it to easily and efficiently synchronize your clocks?
  - Easy to install and maintain – simply place them anywhere you have a Wi-Fi signal
  - All you need is a Wi-Fi network; no master clocks, wires or license agreements required
  - Unnoticeable bandwidth impact
  - Option to arrive preconfigured to your network
  - Automatic DST adjustments

Network Clock Connect (NCC) software used to configure and monitor network clocks provided by American Time.

EverAlert: A Three-in-One Communications System

In most areas of our lives, communications are getting faster and more effective. Your facility should be no exception. EverAlert delivers faster, clearer, customizable communications and emergency notifications.

How are you managing time, news and emergency alerts in your organization?

If you have multiple vendors and systems for clocks, digital signage, severe weather alerts, fire alarms or lockdown notifications, then you’re spending a lot of time and money managing that complexity.

What’s more, most of the systems may not communicate with each other, leaving you with an unconnected network that can’t meet your daily needs – or during a time of emergency.

EverAlert provides a single platform and interface for communicating emergency alerts, routine digital signage and synchronized time. Its graphical displays bolster and extend your existing messaging and emergency notification capabilities.

With the choice of wired Ethernet or Wi-Fi connectivity, the 22-inch, high definition EverAlert displays are easy to install wherever 110 VAC is available.

And as a cloud-based solution, you’ll always have the latest EverAlert features and updates without the cost and hassle of onsite server maintenance.

“The fact that EverAlert can serve multiple functions really impressed me, from displaying news and lunch menus to alerts and emergency information…it’s really unlimited.”

Stand-Alone Wall Clocks

Maybe all you need are a few wall clocks that stay in sync. No problem! We have a variety of battery-powered, electric and digital clocks and styles to choose from.

Why American Time?

Time is not a commodity. How you measure it, work by it and live by it depends on the craftsmanship, quality and pride that goes into each timekeeping piece. This is how we think of our work here at American Time.

With more than two million clocks worldwide, thousands of parts and the ability to repair all major clock brands, you can trust us to have the solution. And with a free, hometown support team behind each of our American-made technologies, you can trust us to have the answer. A real person even answers our phone.

Some may call that old-fashioned. We call it an unwavering commitment to quality, service and support.

Don’t take our word for it.

“It’s basically cheaper for me to buy a new American Time clock than to send in our other brand for repair. And for the record, I haven’t had an American Time clock that needs repair.”
School District of Fort Atkinson

“Both reps that helped me with my order were extremely helpful and made me feel like my order was the most important thing going on at American Time. Keep up the great work!”
EVCO Sound and Electronics

“In all my contacts with your personnel, there has been one abiding principal exhibited by your staff. That is that ALL your customer service personnel have been the most receptive, knowledgeable, and personable people I’ve ever dealt with and in my position believe me, I’ve had to deal with some unpleasant circumstances. Your organization can and should be very proud of your staff. They are outstanding representatives of your company and to be commended for their dedication to outstanding customer support…”
Southern Arizona VA Healthcare System
